

How to install the infrared INTECH IWB®?

INTECH IWB® mobile stand installation

It's quite easy for this installation. Only a wrench needed.

1. Fix the four wheels on the base of stand with the wrench.

2. Plug the two beams into the slots of two vertical poles, and then plug the vertical poles into slots in the middle of bases. Fix them all with screws and washers.

Then the stand would be like this as below:

3. Fix the four small screws into the screw holes on the back of IWB.

4. Hang the IWB on the finished mobile stand by the screws fixed.

5. Make it firm with screwdriver.

6. Then the installation finished.

Remarks:

1. Turn the position control button of wheels into “Lock”. Make the wheels static, not shift.
2. Do not fix the screws too tight to avoid damage on the stand.
